

Create a hotel app(read, write, delete, update). Please note to include UI/UX and all its components.

- **User Authentication:**
 - Users can register and log in using OAuth
- **Accommodation Listings:**
 - Users can view a list of available accommodations.
 - Each accommodation should display:
 - Photo Gallery: Images of the hotel.
 - Map: Location of the hotel.
 - Price Details: Cost per night or other pricing information.
 - Basic Information: Address, star rating, and other relevant details.
 - Hotel Facilities & Policies: Amenities offered and policies.
 - Call-to-Action Button: Button to book or view more details.
 - Sharing Button: Share the accommodation details with others.
 - Favourites Button: Save the accommodation to favourites.
- **Booking Functionality:**
 - Users can book accommodations.
 - Booking should include:
 - Selecting check-in and check-out dates.
 - Number of rooms, and guests, etc.
- **Payments**
 - Implement a payment gateway of your choice.
- **User Profile:**
 - Users have a profile section where they can view/edit their profile, view their bookings and favourite accommodations.
- **Admin Panel:**
 - Admins can log in to an admin panel.
 - Admins can add new accommodations with details like room type, capacity, price, availability, etc.
 - Admins can view reservations, including check-in and check-out dates, guest details, room details, etc..
 - Admins can manage reservations, including approving, modifying, or cancelling them.
 - Admins can update accommodation details, such as room availability, pricing, descriptions, etc.
- **Backend:**
 - Use Node.js as your backend
 - Make use of API creation standards for the API endpoints

- **Data Storage:**
 - Use PostgreSQL to store data about hotels, bookings etc.
 - Create valid relationships in your tables to avoid data redundancy.
- **State management**
 - Use Redux to manage the state of the hotel app.
- **Additional Features:**
 - Search Functionality: Users can search for accommodations based on location, price, and other filters.
 - Reviews & Ratings: Users can leave reviews and ratings for accommodations.
 - Notifications: Users receive notifications for booking confirmations, updates, and promotions.
- **Security:**
 - Implement proper security measures to protect user data and transactions.
 - Make use of proper HTTP methods when making requests to ensure data in transit is protected
- **Additional- Scalability & Performance:**
 - Ensure the app is scalable to handle a large number of users and accommodations.
 - Optimise performance for a smooth user experience.
- **Compliance:**
 - Ensure compliance with relevant regulations and laws regarding user data and transactions.
- **Responsive Design:**
 - The app should be responsive and work well on different devices and screen sizes.
